### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

The invention comprises applying a discontinuous patterned release polymer to a substrate, applying a substrate adherent polymer in a continuous coating on substrate and release polymer patterned regions, and mechanically removing the substrate adherent polymer from release polymer patterned regions. The continuous coating may be applied at a substantially constant height which, when mechanically removed, forms advantageous sharply defined/ perpendicular patterned edges. The method further comprises polyimide as the continuous layer of substrate adherent polymer and the application of discontinuous release polymer and substrate adherent polymer in submicron thicknesses.

The closest prior art is as follows: EP 0 395 411 applies patterned solvent soluble release coatings to a substrate, applying a metal or metal oxide thin film thereover, and dissolving the release layer to leave a patterned thin film. US 3935334 teaches applying a water-soluble pattern layer to a substrate surface, applying a metal coating on the entire surface, and removing the soluble material with metal coating thereon to leave a patterned metal coating. US 5209815 teaches applying a continuous release layer, over which is applied polymer layers, and tape is used to remove portions thereof, as further discussed in Applicants Remarks of at least 8/28/06, pages 9-11.

It is the Examiner's opinion that the Stated Prior Art does not teach, nor fairly suggest to combine, the cited references to produce the invention in this Application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
